ABSTRACT OF THE DISCLOSURE

The present invention provides fusion proteins for the detection and treatment of neuroectodermal tumors. Previous work chlorotoxin is specific for glial-derived demonstrated that meningioma-derived tumor cells. The current invention has extended the use of chlorotoxin-cytotoxin fusion proteins to treat the whole class neuroectodermal tumors such as gliomas, meningiomas, ependymonas, medulloblastomas, neuroblastomas, gangliomas, pheochromocytomas, melanomas, PPNET's, small cell carcinoma of the lung, Ewing's sarcoma, and metastatic tumors in the brain. Also, provided diagnostic methods for screening neoplastic are neuroectodermal tumors.
